Carb.o.lite Awning

Carb.o.lite is a translucent, twinwalled polycarbonate sheet capable of withstanding nature's harshest elements.

Most houses need awnings for many reasons: shade, protection and looks, yet no one wants to diminish the natural light coming into the house.

Carb.o.lite is 99.9% UV protective. UV rays are the element behind the fading and rotting of your furniture and carpet.

The awnings come in a variety of shapes and sizes from the traditional bullnosed to the architecturally domed and the conventional flat.

Carb.o.lite is a lightweight material yet is 200 times tougher than glass. It is impervious to hailstones and will not rot or crack.
